

HIMS Module List

The Way You Deliver Healthcare Is About To Change

By revolutionizing the synergies between the stakeholders, we upgrade the way medical care is delivered. Our solutions are designed for practitioners and patients to seamlessly communicate, exchange and manage medical information by giving healthcare a futuristic makeover.

An end to end PaaS-based solution that integrates operational, clinical, administration, financial and consumer-centric services to not only deliver efficient healthcare but also enhance the patient experience.

Clinician Mobility:

Streamlined mobile access to patient status updates & notification of critical changes in patient condition

Management Dashboards:

Consolidates real-time data from multiple systems presented clearly to support decision making

Operational Dashboards:

Real-time overview & insights to organization-wide status, pressure points & resource utilization

Patient Flow & Access:

Patient status summarizing clinical indicators, resource availability & enabling streamlined care

Clinical Communication:

Secure messaging between clinicians to support ease of communication, clinical workflow & task management

Clinical Documentation:

Observations & assessments captured at point of care, providing real time notification of patient status & deterioration
